***Election/Restrictions***

1. This application contains claims 1-29 directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

**a. Species I**, drawn to a multilayer wiring board wherein at least one of the sum of the thicknesses of the power source conductive layers in said multilayer core substrate and the sum of the thicknesses of the ground conductive layers is larger than thickness of the conductive layer on the interlayer insulation layer.

**b. Species II**, drawn to a multilayer wiring board wherein when the power source through holes pass through the grounding conductive layer of the inner layer in the multilayer core substrate, of the plurality of power source through holes, at least a power source through hole just below the IC or 70% or more power source through holes having no conductive circuit extending from the power source through hole in the grounding conductive layer or when the grounding through holes pass through power source conductive layer of the inner layer in the multilayer core substrate, of the plurality of grounding through holes, at least a grounding through hole just below the IC or 70% or more ground through holes having no conductive circuit extending from the grounding through hole in the power source conductive layer.

2. Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply

must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

3. The claims are deemed to correspond to the species listed above in the following manner:

- claims 1-8 read on Species I
- claims 9-29 read on Species II
- 

4. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: Species II lacks the special technical feature of Species I, such as "wherein at least one of the sum of the thicknesses of the power source conductive layers in said multilayer core substrate and the sum of the thicknesses of the ground conductive layers is larger than thickness of the conductive layer on the interlayer insulation layer."

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Abul Kalam whose telephone number is (571)272-8346. The examiner can normally be reached on Monday - Friday, 9 AM - 5 PM.
